|--|--|
| <p>The regular FG-module is faithful.</p> | <p>The representation $g \mapsto [g]_{\mathcal{B}}$ obtained by taking \mathcal{B} to be the natural basis of FG is called the regular representation of G over F.</p> |
| <p>Suppose that V is an FG-module. The following properties hold for all $u, v \in V$, for all $\lambda \in F$, and for all $r, s \in FG$:</p> <ol style="list-style-type: none"> 1. $vr \in V$, 2. $v(rs) = (vr)s$, 3. $v1 = v$, 4. $(\lambda v)r = \lambda(vr) = v(\lambda r)$, 5. $(u + v)r = ur + vr$, 6. $v(r + s) = vr + vs$, 7. $v0 = 0r = 0$. | <p>Let V be an FG-module, $v \in V$ and $r \in FG$, suppose $r = \sum_{g \in G} \mu_g g$, then we define vr to mean</p> $vr = \sum_{g \in G} \mu_g (vg).$ |
| <p>Let V and W be FG-modules and let $\vartheta : V \rightarrow W$ be an FG-homomorphism. Then $\text{Ker } \vartheta$ is an FG-submodule of V and $\text{Im } \vartheta$ is an FG-submodule of W.</p> | <p>Let V and W be FG-modules. A function $\vartheta : V \rightarrow W$ is said to be an FG-homomorphism if ϑ is a linear transformation and</p> $(vg)\vartheta = (v\vartheta)g \quad \text{for all } v \in V, g \in G.$ <p>In other words, if ϑ sends v to w when it sends vg to wg.</p> |
| <p>Suppose that V is an FG-module with basis \mathcal{B} and W is an FG-module with basis \mathcal{B}'. Then V and W are isomorphic iff the representations</p> $\rho : g \mapsto [g]_{\mathcal{B}} \quad \text{and} \quad \sigma : g \mapsto [g]_{\mathcal{B}'}$ <p>are equivalent.</p> | <p>Let V and W be FG-modules. We call $\vartheta : V \rightarrow W$ an FG-isomorphism if ϑ is an FG-homomorphism and ϑ is invertible. In this case we say V and W are isomorphic FG-modules and write $V \cong W$.</p> |
| <p>Let V be an FG-module and suppose that</p> $V = U_1 \oplus \cdots \oplus U_r$ <p>where each U_i is an FG-submodule of V. For $v \in V$, we have $v = u_i + \cdots + u_r$ for unique vectors $u_i \in U_i$, for $1 \leq i \leq r$, define $\pi_i : V \rightarrow V$ by</p> $v\pi_i = u_i.$ <p>Then each projection π_i is an FG-homomorphism.</p> | <p>If $V = U_1 \oplus \cdots \oplus U_r$ is a direct sum of FG-submodules, U_i each with basis \mathcal{B}_i then we can amalgamate $\mathcal{B}_1, \dots, \mathcal{B}_r$ to obtain a basis \mathcal{B} of V and representations</p> $[g]_{\mathcal{B}} = \begin{pmatrix} [g]_{\mathcal{B}_1} & & 0 \\ & \ddots & \\ 0 & & [g]_{\mathcal{B}_r} \end{pmatrix}$ |
